Diagnosis and treatment plan

Diagnosis:	F33.2 - Major depressive disorder, recurrent severe without psychotic features
Presenting Problem:	Depression
Behavioral Definitions:	Depressed mood. Note: progressing. Diminished interest in or enjoyment of activities, low energy, disrupted sleep. Note: same. Social withdrawal, loneliness, adjusting to loss of relationship. Note: progressing. Feelings of hopelessness, worthlessness, low self-esteem, poor concentration. Note: progressing.
First Goal	Alleviate depressive symptoms and return to previous level of effective functioning/improved quality of life, per client's report.
Objective 1	Learn and implement cognitive-behavioral strategies to reduce depressive symptoms, better manage symptoms, and prevent symptoms. Interventions Engage the client in "behavioral activation," increasing his activity level and contact with sources of reward, while identifying processes that inhibit activation; or assign "Identify and Schedule Pleasant Activities"; use behavioral techniques such as instruction, rehearsal, role-playing, role reversal, as needed, to facilitate activity in the client's daily life; reinforce success. Assist the client in developing skills that increase the likelihood of deriving pleasure from behavioral activation (e.g., assertiveness skills, developing an exercise plan, less internal/more external focus, increased social involvement); reinforce success. Increase steps to attain personal goals such as improved financial stability and improved interpersonal relationships. Assist client in identifying and replacing thoughts that support depression. Conduct cognitive-behavioral therapy, helping the client connect his cognitions/thoughts, depressive feelings, and actions/behaviors. Assist client in identifying and utilizing his strengths.
Objective 2	Process changes that have occurred since moving to Maryland while grieving the loss of relationships. Interventions Support client's grieving stages and provide opportunities for client to adjust to changes. Continue to facilitate processing of the completed trauma narrative and the growth takeaways. Assist client in identifying and utilizing his strengths.
Objective 3	Learn and implement self-care strategies that promote improved mood. Interventions Teach, facilitate, and support aspects of self-care (physical, social, spiritual, emotional) including healthy boundaries, social connections, physical activity, etc. Assist client in identifying and utilizing his strengths.

Diagnosis:	F41.9 - Anxiety disorder, unspecified
Presenting Problem:	Anxiety
Behavioral Definitions:	Fearful, anxious, avoidant, distrusting. Note: progressing. Motor tension (e.g., restlessness, tiredness, shakiness, muscle tension, tightness in chest). Note: progressing to improving. Autonomic hyperactivity (e.g., heart beats faster, increased need for deep breaths, chronic heartburn). Note: progressing. Hypervigilance (e.g., feeling constantly on edge, on guard, experiencing concentration difficulties, having trouble falling or staying asleep, yelling and/or discord with loved ones). Note: progressing.

Client: Lionel Allard (Casey Allard)
DOB: 05/27/1985

First Goal	Reduce overall frequency, intensity, and duration of the anxiety so that daily functioning is not impaired.
Objective 1	Continue to learn and implement calming, relaxation, mindfulness skills to reduce overall anxiety and manage anxiety symptoms. Interventions Teach the client calming, mindfulness, relaxation skills (e.g., progressive muscle relaxation, mindful breathing) and how to discriminate better between relaxation and tension; teach the client how to apply these skills to his daily life. Assign the client homework in which he practices relaxation exercises daily, gradually applying them progressively from non-anxiety-provoking to anxiety-provoking situations; review and reinforce success while providing corrective feedback toward improvement. Assist client in identifying, utilizing, and reinforcing his strengths. Assign mindfulness exercises and reinforce their use to encourage internalization.
Objective 2	Identify thought patterns and behaviors that contribute to and/or reinforce anxiety symptoms and begin to replace them with those that help to decrease symptoms. Interventions Conduct CBT, assist client in identifying anxiety-producing/reinforcing thoughts and behaviors, while assisting client in replacing them with those that lessen and alleviate symptoms. Support and facilitate client identifying, processing, and challenging core beliefs and fears while problem-solving and role playing action steps and solutions that reinforce client's strengths and resiliency skills. Assist client in identifying and utilizing his strengths. Reinforce. Review the use of mindfulness practices.
Objective 3	Apply the growth takeaway from the trauma narrative. Consider completing another narrative. Interventions Facilitate the client utilizing the narrative takeaways. Consider completing another narrative that allows for client to process events, thoughts, and feelings associated with these events, while facilitating the healing process. Assist client in identifying and utilizing his strengths.

Diagnosis:	F90.0 - Attention-deficit hyperactivity disorder, predominantly inattentive type
Presenting Problem:	Adult ADHD
Behavioral Definitions:	Often fails to give close attention to detail or makes mistakes. Often fidgets with or taps hands and feet or squirms in seat. Often has difficulty sustaining attention in tasks or activities. Often feels restless. Often does not follow through on instructions and fails to finish duties. Often has difficulty organizing tasks and activities. Often avoids, dislikes, or is reluctant to engage in tasks that require sustained mental effort. Often interrupts, doesn't wait for his turn, or blurts out answers before a question has been completed. Is easily distracted by extraneous stimuli. Is often forgetful in daily activities.
First Goal	Minimize ADHD behavioral interference in daily life.
Objective 1	Identify the current specific ADHD behaviors that cause the most difficulty and skills to address them.

Client: Lionel Allard (Casey Allard)
DOB: 05/27/1985

Interventions Assist the client in identifying the current specific behaviors that cause him the most difficulty functioning.
Teach and support the client learning skills to address the behaviors, as well as utilizing past effective skills.
Ask the client to have extended family members and close collaterals complete a ranking of the behaviors they see as interfering the most with daily functioning (e.g., mood swings, easily stressed, short attention span, never completes projects).
Identify client's strengths and reinforce.

Objective 2 Learn and implement skills to reduce procrastination.

Interventions Teach the client to apply new problem-solving skills to planning as a first step in overcoming procrastination; for each plan, break it down into manageable time-limited steps to reduce the influence of distractibility.
Teach the client to apply new cognitive restructuring skills to challenge thoughts that encourage the use of procrastination (e.g., "I can do this later" or "I'll finish this after I watch my TV show") and embrace thoughts encouraging action.
Assign homework asking the client to accomplish identified tasks without procrastination using the techniques learned in therapy; review and provide corrective feedback toward improving the skill and decreasing procrastination.
