

Additional Geometric Router Architecture Diagrams

These diagrams illustrate additional conceptual mechanisms used in the geometric routing architecture.

Token Lifecycle Through Router

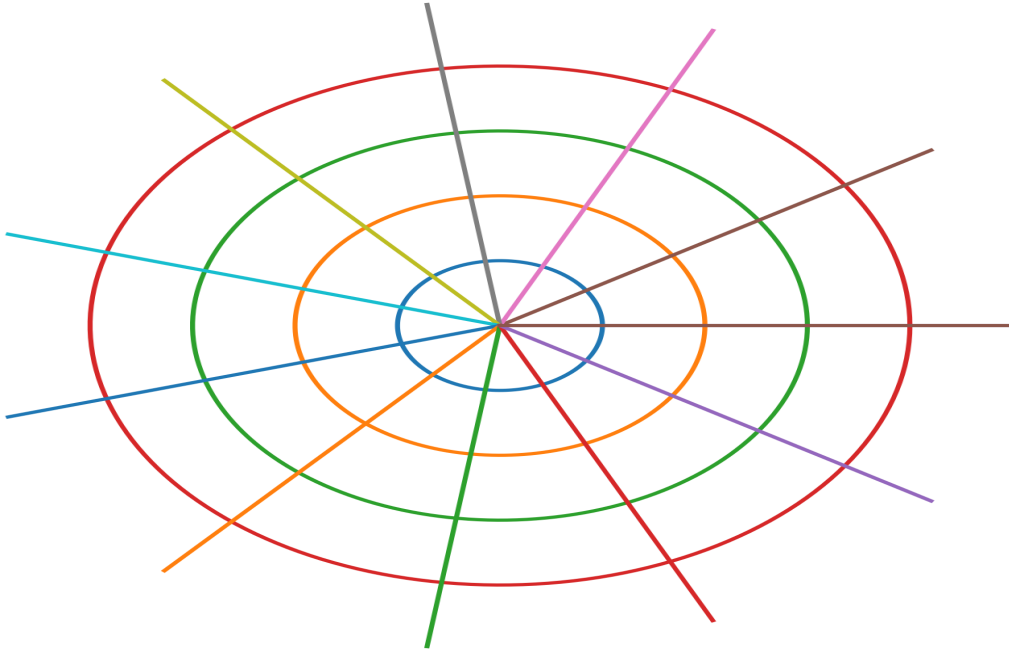

Token Lifecycle Through Geometric Router

Illustrates the path of a token as it moves through embedding, geometric routing, event firing, and retrieval stages.

Hopf Fiber Structure

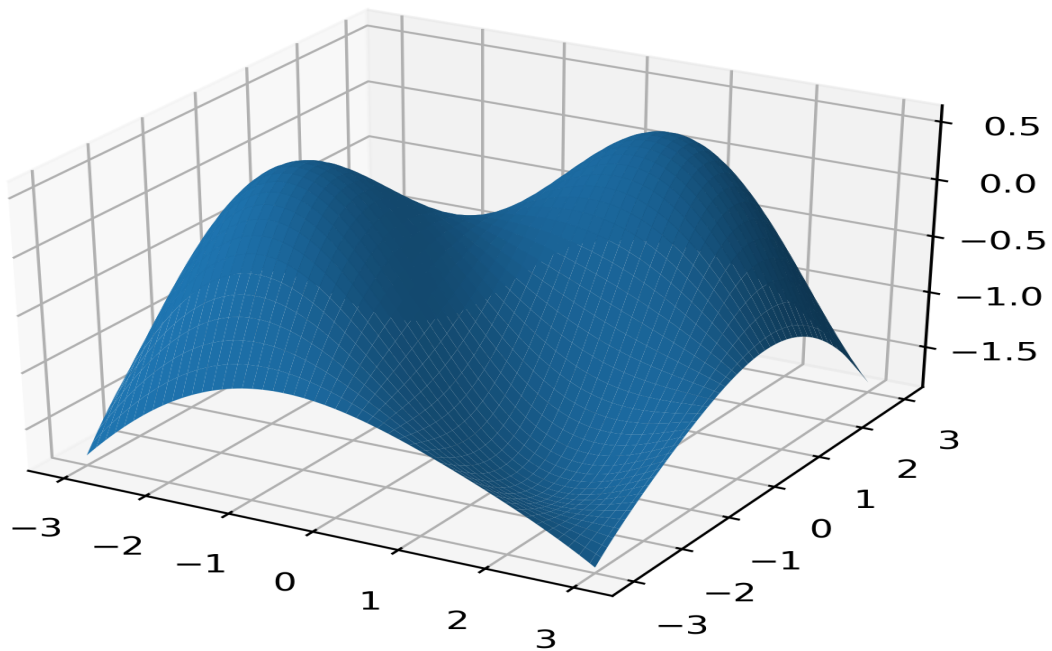

Conceptual Hopf Fiber Structure

A conceptual diagram representing fiber structure inside the routing manifold, showing circular fibers over base coordinates.

Discrete Routing Wells

Discrete Routing Wells / Minima Landscape

Potential landscape with minima that guide signal flow and stabilize routing paths across the manifold.
