

Basically quantum computing

Allows you to create new logic gates based on sets of numbers or probabilities instead of on and off only

The call of the void

We as a species, for some reason prefer that things be unfair. It's interesting, because we claimed to want life to be fair but are disappointed by how much more difficult it is when it is fair. So, instead, we actually prefer life to be unfair and us to be smart enough to use the things in life that make it unfair to gain an advantage for ourselves.
